ICM Omnibus background

This file contains the data collected as part of the ICM Omnibus survey. All the data and information is confidential and was collected in compliance with ISO 20252 and ISO 27001.

Methodology: ICM Omnibus is a quantitative syndicated survey conducted twice a week. The survey is conducted online, interviewing a nationally representative sample of 2,000 GB adults (aged 18+). Interviews are completed by members of ICM's newvista panel who have agreed to take part in our surveys. Participants are invited by email which are sent to panellists selected at random from our panel. Emails are sent to panellists selected at random from our panel. ICM always intends to complete all aspects of projects in house; however we reserve the right to outsource some elements using approved suppliers (e.g. our panel partners). The responding sample is weighted to the profile of the sample definition to provide a representative reporting sample. The nationally representative profile is based on census data collected by the Office for National Statistics.

All results are based on a sample and are therefore subject to statistical errors normally associated with sample-based information.

For further information about the results in this spreadsheet, please contact the ICM Omnibus team on +44 20 7845 8313 or omnibus@walnutunlimited.com.

Whenever using ICM Omnibus data in the public domain please add the following information:

All data, unless otherwise stated, is from ICM Unlimited, a trading name of Walnut Unlimited, **the human understanding agency**. Walnut is part of the Unlimited Group.
Source: ICM Omnibus, a nationally representative omnibus survey of 2,011 adults across GB between 06 and 09 December 2019.
The figures have been weighted and are representative of all GB adults (aged 18+).

When analysing and reporting the data please note:
Any percentages calculated on bases fewer than 50 respondents are indicative only and not representative.
Bases lower than 50 are marked with * (low bases size); bases lower than 30 are marked with ** (very low base size & ineligible for significant testing)
If reported, all significant testing of percentages and mean scores are reported on a 95% confidence level / 5% risk level.
All significantly different data is marked with a letter used in the column heading - e.g. Gender (a/b), Age (c/d/e/f/g/h/i), Region (j/k/l/m/n), etc.

Q1. Would you say that you have a positive or negative view of each of the following groups?
