

**BRITISH SYNAGOGUE
MEMBERSHIP IN 1990**

MARLENA SCHMOOL

FRANCES COHEN

COMMUNITY RESEARCH UNIT
BOARD OF DEPUTIES OF BRITISH JEWS

**Community Research Unit
Board of Deputies of British Jews**

The Board of Deputies, founded in 1760, is the representative body of British Jewry. The Community Research Unit was established in 1965 following a conference on 'Jewish Life in Modern Britain' which the Board convened in 1962 in association with the Institute of Contemporary Jewry of the Hebrew University, Jerusalem. The Unit compiles statistical data on various aspects of the community, prepares interpretive studies of social and demographic trends and acts as a resource centre for scholars, planners and communal organisations.

PREFACE

This listing is the third prepared by the Community Research Unit of the Board of Deputies following compilations for 1977 and 1983. The figures presented relate to mid-1990. To the best of our knowledge all congregations in the United Kingdom are included: we would be pleased to be told of any unwittingly omitted. In order to compare data across synagogue groupings and between areas, our analytical base (which is described fully in the Appendix) is such that data presented here for individual synagogues may differ from membership figures published by synagogal bodies. This is particularly the case where synagogues count husbands and wives as two individual members: we have considered them as one household membership.

We are grateful to Steve Laitman of CSS for his invaluable help with layout and graphics and to Jane Pugh of the Department of Geography at the London School of Economics for drawing the maps.

Previous listings are B.A. Kosmin and D. de Lange, *Synagogue Affiliation in the United Kingdom 1977* and B.A. Kosmin and C. Levy, *Synagogue Membership in the United Kingdom 1983* both published by the Board of Deputies of British Jews. The source for 1970 figures quoted in the text is S.J. Prais, 'Synagogue Statistics and the Jewish Population of Great Britain 1900-1970', *The Jewish Journal of Sociology*, XIV (1972), pp 215-228.

OVERVIEW

This booklet provides details of synagogue membership in the United Kingdom in 1990. The data were collected directly from the records of major London synagogal organisations and by postal questionnaire from individual synagogues throughout the Provinces. Data collection was conducted over a period of a year in order to ensure all synagogues and congregations were recorded. Full details of the questions asked are included in the Appendix. Our report covers the whole religious spectrum of British Jewry each section of which has its own criterion for membership.

Historically, the pater familias held membership to cover his wife, any children under the age of majority and any daughters over that age. Sons who were of age were expected to have membership in their own right. Insofar as they have formal membership, this pattern still prevails for Orthodox synagogues. When a male head of household dies the membership is continued by his widow. On the other hand, many (mainly Progressive) synagogues have adopted a system of family membership where either husband and wife are each considered as individual members or the family is deemed to be one member.

In the tables that follow the numbers provided to us have been standardised as far as possible to ensure comparability between these different approaches. Full details of the method employed in calculating 'household membership' are given in the Appendix. Within the confines of the figures provided to us it is not possible to calculate the size of each household. Furthermore, given the level of record-keeping in many synagogues we doubt whether such data is to any great extent available. We can say that, for the most part, household membership covers at least (married) partners but in other cases it may represent a single-parent family with children.

A problem arises in categorising the community according to its religious nature. As in other religions in this country, Judaism displays a continuum from non-adherence (to any belief or ritual) to complete observance of Halachah. While it is distasteful to distinguish between degrees of observance within Orthodoxy, particularly when most mainstream Orthodox synagogues have a core of strictly observant members, in popular parlance synagogues where all members are halachically observant have become known in Britain as 'Right - Wing'. The remaining majority of Ashkenazi Orthodox synagogues are grouped as 'Central Orthodox'. This distinction is maintained in the tables which follow.

Congregations and Membership

In 1990 there were 356 congregations in the United Kingdom with a total membership of 101,239 analysed hereunder. A further 9150 married women were recorded as having membership in their own right in addition to their husband's (household) membership; they are not included in the analysis. This 356 is a net increase of 28 synagogues since 1983 due mainly to the number of small, Right Wing, congregations established in Manchester and North London and to Reform and Liberal communities set up in different areas. There

is also an (analytical) increase in Sephardi synagogues as the three making up the London Spanish & Portuguese Jews' Congregation have been named individually; previous compilations have combined them. In contrast there have been a number of closures and mergers related to population movement. While some two-thirds of the synagogally-affiliated community are found in London only slightly more than half the congregations (183 of them) are situated there. This gives an average size of congregation of 370 members in London and 194 members in the Provinces.

Congregations and Household Membership by Geographical Distribution

	1983				1990			
	Estimated Household Memberp	%	Number of Congs	%	Estimated Household Memberp	%	Number of Congs	%
Greater London	73479	67	162	49	67630	67	183	51
Provinces	35947	33	166	51	33609	33	173	49
UK	109426	100	328	100	101239	100	356	100

Of the 173 congregations outside Greater London, 87 are in major Jewish centres such as Manchester, Leeds and Brighton while 86 are in 68 communities, throughout the United Kingdom from Scotland to the South-Coast and including Northern Ireland, Jersey and the Isle of Man, which have a Jewish population of under 1500.

Greater London

The 183 synagogues in Greater London in 1990, with an average household membership of 370, compare with 162 congregations in 1983 each then with an average 454 household memberships. Between 1983 and 1990, eleven synagogues closed in Greater London and 32 opened. Notwithstanding the increased number of synagogues, the total household membership in Greater London has fallen by 8 percent, a greater rate of decline than during the period 1977-83. Between 1977 and 1990 the household membership of Greater London decreased by 9.9 percent. This fall is paralleled by an increase in membership in South-East England (reported below).

The movement westwards noted in 1983 has continued: the London Boroughs of Barnet, Harrow and Hillingdon together now account for 14 percent of London (and nine percent of national) synagogue household membership. With the exception of Hackney, which has a very particular synagogal make-up and alone accounts for almost 12 percent of synagogally-affiliated households in Greater London, it would seem that Inner London is changing in line with the northern provincial communities where older-aged communities result in reduced synagogue membership. The population shift to the areas of the South East adjacent to Greater London has attenuated replacement of membership in the more central synagogues.

Coverage

In presenting the 1983 figures, Kosmin and Levy put forward a number of caveats: these bear repeating. First, synagogue membership numbers do not equal population counts even though the majority of identifying British Jews belong to a synagogue. Secondly, total household numbers are a little inflated because of dual memberships. These occur when a household, as a unit or an individual, belongs to more than one synagogue, when more than one person at a single address has individual membership, or when husband and wife are each considered individual members. An illustrative analysis of major synagogues in Manchester in 1990 indicates dual membership there of 2.3 percent. Moreover some overstatement of households occurs because people in residential homes are included, via the single member counts, as households. Third, particularly in London boroughs, synagogue membership cannot be taken as a guide to the size of the local Jewish population. Some London boroughs have no synagogues, but this does not mean Jews are completely absent from those areas. At the same time other boroughs have synagogues - often established by earlier generations of residents - whose current members live outside the borough boundary. Other synagogues, e.g. in areas of sparse Jewish population or in the centre of large towns, often have members living in a wide catchment area.

KEY TO ABBREVIATIONS IN LISTINGS

AFFILIATION

Fed	Federation of Synagogues
Mas	Masorti
RSGB	Reform Synagogues of Great Britain
ULPS	Union of Liberal and Progressive Synagogues
UO	Union of Orthodox Hebrew Congregations
US	United Synagogue
Ind Orth	Non-affiliated, Orthodox synagogue
Ind Prog	Non-affiliated, Reform/Liberal synagogue
HC	Hebrew Congregation
JComm	Jewish Community

CATEGORIES

Analytical groups in the text tables relate to affiliation in the congregational tables as follows:

Right-Wing Orthodox:	UO
Central Orthodox:	Fed, US, Ind Orth, and provincial congregations not otherwise categorised
Reform:	RSGB and Westminster Synagogue.
Liberal:	ULPS and Belsize Square Synagogue.

SECTION 3 - PATTERNS IN SYNAGOGUE MEMBERSHIP 1970-1990

Regional Change

Table 3.1 shows the change in numbers of Jewish households in each region between 1983 and 1990. The overall decrease of 8187 households (7.5 percent) shown is probably a slight exaggeration because the 1983 total household membership included an unspecified number of women who had membership in addition to, or alongside their husband. The present method of compilation allows us to omit this group from the totals. Individual females account for 9.2 percent of all 1990 household membership but this underestimates female membership as many family/households had a female head but not all congregations were able to say whether a household was headed by a man or a women.

Table 3.1 Regional Change 1983-1990

Region	Household Membership		Net Change 1983-1990
	1983	1990	
Greater London	73479	67630	-5849
Rest of South East	7932	9228	+1296
South West	1420	1779	+359
East Anglia	193	224	+31
East Midlands	822	762	-60
West Midlands	2163	1688	-475
Greater Manchester	8086	7675	-411
Rest of North West	3377	2608	-769
Yorkshire & Humberside	5243	5013	-230
North	1244	1093	-151
Scotland	4206	2489	-1717
Wales	837	716	-121
Northern Ireland	312	221	-91
Jersey	82	88	+6
Isle of Man	30	25	-5
UK	109426	101239	-8187

Most regions declined, with slight increases only in those which experienced general population growth. Growth in membership noted in South-East England, South-West England and East Anglia at the beginning of the decade has been sustained from 1983 to 1990. Greater Manchester, which showed an increase in the earlier period, has now decreased. The most marked decline has been in Scotland, where membership has decreased by 41 percent since 1983 with the communities in Dundee and Aberdeen virtually disappearing.

The rise in South-East England is due mainly to the continuing inflow of young families to communities contiguous with Greater London. These Home Counties communities increased by five percent from 1977 to 1983 and by a further 16 percent to 1990: between 1977 and 1990, they have grown by 21.8 percent. This trend is linked to the general move to the suburbs and also to the difficulty which younger families have in finding suitably-priced housing within Jewish areas of Greater London. The South-West area showed the largest proportionate increase in household membership (25 percent) reflecting both the economic growth of the area, with families following work opportunities, and a sustained local effort to involve Jewish households in communal activities.

Male Membership

Whereas this report sets out total memberships on a household basis, previous analyses concentrated on the number of men holding synagogue membership. In order to examine 20-year trends, male membership for 1990 has been calculated, from the raw data available to the Unit, as equal to individual males plus either male heads of household or family memberships and the results are reported in Tables 3.2 to 3.4.

Table 3.2 The Geographical Distribution of Male Synagogue Membership 1970-1990

	1970		1977		1983		1990	
	Total	%	Total	%	Total	%	Total	%
GLC	60066	67.9	55494	66.9	53359	67.6	50305	63.4
Provinces	28368	32.1	27504	33.1	25540	32.4	29083	36.6
UK Total	88438	100.0	82998	100.0	78899	100.0	79388	100.0

Table 3.2 sets out the levels of male membership, in London and the Provinces for the period 1970 to 1990. There was a decrease from 1970 to 1983 but the 1990 figure shows a slight rise due to an overall provincial increase. This, however, is not consistent throughout Great Britain: traditional Jewish centres in the industrial North and Midlands have continued to decline while, as discussed above, loss there is offset by certain communities in South Hertfordshire and South-West Essex which are growing rapidly.

The overall provincial increase has caused a shift in the London:Provinces ratio of male synagogue members. Since statistics were first compiled in 1970 at least 67 percent of all male synagogue members have been recorded as belonging to a London synagogue. The current compilation shows that this proportion is now 63 percent.

The difference in female membership between London and the Provinces recorded in 1983 has been sustained. Some 15 percent of all provincial memberships were individual lady members; the comparable proportion for London was 6.3 percent. This suggests a continuation of the relative agedness of members in the provincial communities, due to widows maintaining a household membership after their husband's death.

Synagogal Grouping

Past problems in defining female memberships prevent comparison of earlier household membership profiles with the current figures. Trends in patterns of religious grouping are therefore examined on the basis of male membership but Table 3.3 also sets out the household percentages for 1990. These may then both be compared with 1990 male membership ratios and be used as a benchmark for future household comparisons.

Table 3.3 Distribution of UK Synagogue Membership by Synagogue Grouping

	Males		Numerical Change 1983-1990	H/holds
	1983 %	1990 %		1990 %
Right Wing Orthodox	4.4	6.9	+2015	5.7
Central Orthodox	70.5	64.9	-4148	67.9
Sephardi	2.7	2.8	+97	3.2
Reform	15.2	17.0	+1526	16.9
Liberal	7.2	8.4	+999	6.3
Total	100.0	100.0		100.0
Number	78899	79388	+489	101239

A comparison of male with household membership distributions shows the bias towards male membership of Right Wing orthodox congregations. While 6.9 percent of male membership is found in this group, only 5.7 percent of household membership is similarly accounted for. Of the other groupings, solely the Liberal accounts for a smaller proportion of household than of male membership which, for them, is almost certainly overstated because female heads of households could not always be pinpointed and excluded from the male figures. This last factor accounts for an unspecifiable part of the increase in Liberal male membership from 1983 to 1990 and means also that the proportion of male membership of all other groups is (marginally) understated.

For the Reform group it was possible to adjust household figures to allow for those with female heads of household. Thus, while the Reform group accounts for 17 percent of both male and household membership in 1990, this represents some 13,500 male memberships but 17,110 household memberships. Both the Central Orthodox and the Sephardi groups account for a higher proportion of households than of male membership, indicating the effect of individual female memberships on the total of these groups. It specifically underlines the relative over-representation of female members in the provinces and Inner London where the majority of these synagogues are situated.

The strong concentration of Right Wing orthodox membership in the London area shows when trends in male membership for Greater London are examined. The Right Wing Orthodox male membership in London showed an increase of 56 percent from 1983. In 1990 8.8 percent of London total male membership belonged to this group of synagogues compared with 6.9 percent nationally but only seven percent of London households were Right Wing orthodox. In contradistinction, the female bias of the Central Orthodox group is indicated by the fact that 58.2 percent of males compared with 64.4 percent of households in London were Central Orthodox (nationally the ratios are 64.9 percent of males and 67.9 percent of households).

The Changing Pattern of Male Membership by Synagogue Grouping in Greater London, 1970-1990

Throughout the United Kingdom, decline in membership has been confined to the Central Orthodox group. Nationally, male membership for this group fell by 7.4 percent between 1983 and 1990. Within Greater London the fall, at 17 percent, has been more than double the national average.

Table 3.4 The Changing Pattern of Membership by Synagogue Grouping in Greater London, 1970-1990

	Males				Numerical Change 1983-1990	H/holds %
	1970 %	1977 %	1983 %	1990 %		
Right Wing Orthodox	2.6	4.2	5.3	8.8	+1599	7.0
Central Orthodox	72.3	69.7	66.0	58.2	-5939	64.4
Sephardi	4.5	3.3	3.3	3.7	+100	4.0
Reform	11.9	13.7	16.5	18.0	+251	17.3
Liberal	8.7	9.1	8.9	11.3	+935	7.4
Total	100.0	100.0	100.0	100.0		100.0
Number	60066	55494	53359	50305	-3054	67630

As set out in Table 3.4 over the wider timescale of 1970-1990, male membership analyses for Greater London show that Central Orthodox memberships are now at two-thirds the level of two decades ago. Of the other groups, only the Sephardi has declined over the period - falling by 32 percent. All other groups in Greater London have increased male membership numbers. The largest proportional increase has been amongst the Right Wing Orthodox whose synagogue numbers (albeit starting from a low level) are now at just under 3 times higher than their 1970 level. The Progressive groups have also grown over the period. Reform memberships have risen by almost 27 percent and Liberal by some 9 percent. However, this latter figure must be viewed with caution for reasons given earlier.

For the United Kingdom as a whole, trend data are only available for 1977-1990. Over this shorter period, Central Orthodox male memberships have fallen by 15.5 percent and Sephardi numbers have shown a very small (0.6 percent) decrease. The Right Wing increase has been 89 percent; Reform numbers have increased by 24.3 percent and Liberals by 13.4 percent (with the aforementioned caveat).

The 1990 figures show that the move away from the traditional mainstream Anglo-Jewish orthodoxy (as defined by membership of a London or Provincial Ashkenazi Central Orthodox synagogue) has continued. The nature of the present research does not allow us to say how much of this change in patterns of membership is due to natural increase within groups and how much results from movement either between synagogal groups or completely away from the synagogue-oriented community. However, it is clear that the progressive movements continue to increase - as do the more religiously observant sections of the orthodox grouping.

The old-established Central Orthodox communities of the provinces, and to an increasing extent Inner London, are ageing and reducing in size. Comparison of national household membership distributions with vital indicators (see Table 3.5) shows that the Orthodox grouping overall accounts for a disproportionate number of deaths. While the high proportion of orthodox deaths to some extent reflects the fact that in certain areas only orthodox burial facilities are available, it also highlights the high number of female

Orthodox memberships. When the widows who make up much of this group eventually disappear from the household counts the relative size of the Central Orthodox group will be reduced further. Within the Orthodox group as a whole, their numbers are being compensated for by the Right Wing Orthodox. The younger age structure of this group is indicated by their disproportionate share of synagogue marriages. For the Progressive movement, the younger membership of the Reform section is shown by their lower proportion of deaths than of marriages.

Table 3.5 **Distribution of Synagogue Membership and National Vital Indicators by Synagogue Grouping**

	Household Membership 1990 %	Marriages 1990 %	Deaths 1990 %
Right Wing	5.7	9.4	
Central	67.9	65.8	
Sephardi	3.2	4.3	
Orthodox	76.8	79.5	80.1
Reform	16.9	15.2	12.0
Liberal	6.3	5.3	7.9
Progressive	23.2	20.5	19.9

The movement of synagogue membership over the past 20 years has been away from the centre. Nevertheless, the Central Orthodox grouping predominates, accounting for just over two-thirds of all synagogally-affiliated households. Writing in 1983, Kosmin and Levy felt that this numerical domination would continue for the foreseeable future. The 1990 data suggest this conclusion still holds. However, it must be pointed out that between 1983 and 1990 male synagogue membership of the Central Orthodox declined by one percent per annum at a time when the Right-Wing Orthodox increased annually by 9.7 percent.

Thus, although Central Orthodoxy remains the major synagogal tendency within British Jewry as a whole, the balances within the Orthodox group are shifting quite rapidly. The Central Orthodox group is now 87 percent of total Orthodox male membership nationally and 82 percent in London whereas in 1970 in London its share was 91 percent, and in 1977 in the United Kingdom 92 percent, of Orthodox males. These falls have been matched by proportional rises for the Right Wing. Between 1970 and 1990 in London their proportion of Orthodox male membership rose from 3.2 percent to 12.4 percent and between 1977 and 1990 in the United Kingdom the comparable increase was from 4.4 percent to 9.2 percent. Trend data are not available for household memberships but, in 1990 the Right Wing accounted for 7.5 percent of Orthodox households in the United Kingdom and 9.3 percent in London.

While British Jewry continues to be predominantly Central Orthodox: British Orthodoxy is becoming increasingly Right Wing. The figures above provide the statistical dimensions of trends and changes observed and reported by communal commentators over the past decade.

APPENDIX

SOURCES, METHODS AND DEFINITIONS

Individual synagogues throughout the United Kingdom were approached directly for membership details. Where appropriate the details were obtained from central synagogal authorities and as far as possible Research Unit staff collected figures directly from their central records. Synagogues making returns were asked to distinguish between (a) male heads of households and (b) individual males; (c) female heads of households and (d) individual females; and (e) members' wives who also had separate individual membership in their own right. Where details were not available in that form, synagogues were asked for numbers of (a) family/household memberships; (b) other individual males; and (c) other individual females. These formulations were adopted both to overcome the difficulties in apportioning female membership and to take account of differing policies towards it.

Where male and female household data were given separately, the figures were combined to provide a number of households for each synagogue. Where household or family totals had already been given, these were used. In the full listings details are given of households, individual males and individual females. The numbers of male and female individual members include single persons, widows and widowers, divorcees, and adult children who live with their parents but have membership in their own name. Members' wives who have additional membership in their own right are not included in any tabulations. In those tables where analyses of male membership are presented, as in past studies household/family units are all assumed to have a male head.

The method of reporting adopted avoids excluding those households headed by females from composite analyses of membership patterns. Furthermore, analysing households without specifying the sex of the head of household is more appropriate to contemporary social realities which include increasing numbers of single-parent families (usually headed by a mother) and single-person households (many of which are widows living alone).

We were also anxious to ensure that, as far as possible, figures for synagogues affiliated to the Union of Orthodox Hebrew Congregations and similar small, often Chassidic, congregations only included each member once, as individuals often attend more than one congregation in the course of a week. These communities are reticent about disclosing numbers and special care was taken to confirm returns with at least two informed respondents working in and associated with them. If they did not have records of membership in the standard format, congregations were asked for numbers of (a) married men who were heads of families; (b) other (single) men; (c) women who were heads of families; and (d) single women (not daughters of families) who attended regularly on Shabbat (Saturday) morning.

This formulation was adopted to prevent duplication of numbers. Most figures for this group were collected by telephone from either the synagogue/congregation secretary or from personal contacts within the community. Despite many requests for finer detail, some synagogues only gave total household figures which were then counterchecked as explained above. They are marked * in the listings.
